AMERICAN TORCH TIP

Inner Armor

Protective inner armor – a brass alloy insert – guards against wear and extends nozzle life.

The cool-running Lightning® tapered-seat contact tip is designed to dissipate heat quickly through increased surface area, and maximize electrical conductivity.

Dual start-point threads allow re-seating of the tip when wire wear begins to affect performance. Just rotate the tip counter-clockwise 180° to a new wear-point and double the life of the contact tip.

Insulated aircraft aluminum protects the 650 AMP capacity gooseneck.

Hard Body

High-strength N-66 handle is engineered with a special impact additives and reinforcing ribs, making it virtually indestructible. This solid construction puts Lightning® in a class of its own.

Lifetime Warranty on handle and trigger switch.

Defensive Shield

The secret behind Lightning®’s super tough cable is electron-beam accelerators that modify and strengthen the outer cover. This protective shield guards against tearing, stretching and abrasion.

Inner tubing, made of Hytrel, is kink- and impact-resistant for smooth and reliable wire feed.

Copper strand-count and gauge is optimized for each cable’s amperage rating, resulting in a perfect blend of flexibility and strength.

Plug-and-Play

Lightning® is ready to work right out of the box with most popular welding systems. Components are designed for quick, easy switch-outs.

SEMI-AUTOMATIC GUN
250, 350, 450, 550 AMPS

GENERAL SAFETY

1. Disconnect all power before servicing or changing Lightning welding gun components. Failure to disconnect power can lead to dangerous electrical shock which can kill.
2. Smoke, fumes and gases can be dangerous to your health. Keep smoke, fumes and gases from the breathing area. Fumes from welding are of various types and strengths, depending on the kind of base metal being welded.
3. Arc welding produces dangerous light radiation. Adequate eye protection must be worn.
4. All exposed skin must be covered with flame resistant, protective clothing. Do not wear clothing made from flammable synthetic fibers.
5. Protective screens or barriers should be used to protect others from spatter, flash and glare while welding.

TROUBLESHOOTING

Contact tip burn back.

Possible Cause

1. Improper voltage and/or wire feed speed.
2. Erratic wire feeding.
3. Improper tip stickout.
4. Improper electrode stickout.
5. Faulty ground.

Possible Solution

1. Set parameters.
2. See 'Erratic Arc'.
3. Adjust nozzle / tip relationship
4. Adjust torch to base metal relationship.
5. Repair all cables and connectors.

Tip disengages from retaining head.

Possible Cause

1. Worn retaining head.
2. Improper tip installation.

Possible Solution

1. Replace tip and/or retaining head.
2. Finger-tighten, then finish tightening with the appropriate tool.

Erratic arc.

Possible Cause

1. Worn contact tip.
2. Buildup inside of liner.
3. Wrong tip size.
4. Incorrect Welding Parameters

Possible Solution

1. Replace.
2. Replace liner, check condition of electrode.
3. Replace with correct tip size.
4. Use wire manufacturer's parameters

Excess spatter.

Possible Cause

1. Improper machine parameters.
2. Incorrect tip or installation.
3. Incorrect nozzle or shielding.
4. Contaminated wire or work piece.

Possible Solution

1. Adjust parameters.
2. Adjust nozzle / tip relationship.
3. Use correct nozzle and shielding gas coverage.
5. Replace wire and clean work piece.

Discolored Liner.

Possible Cause

1. Short circuit to electrode.
2. Cuts in outer jacket, copper exposed

Possible Solution

1. Check for wire short circuiting in feeder
2. Replace gun.

16

LIGHTNING®

TROUBLESHOOTING

Wire not feeding or bumpy feeding.

Possible Causes

1. Feeder relay / malfunction.
2. Broken control lead.
3. Poor adaptor connection.
4. Incorrect type of drive rolls.
5. Improper drive rolls size.
6. Drive roll tension misadjusted.
7. Burn back to contact tip.
8. Wrong size liner.
9. Buildup inside of liner.
10. Worn drive roll.
11. Improper guide tube relationship
12. Improper wire guide diameter.
13. Gaps at liner into gas diffuser

Possible Solution

1. Consult feeder manufacturer.
2. Connect spare control leads.
3. Test and replace leads and/or contact pins.
4. Use manufacturers recommended drive rolls
5. Replace with proper size.
6. Adjust tension at feeder.
7. See 'Contact tip burn back'.
8. Replace with correct size.
9. Replace liner, check condition of electrode.
10. Replace with new drive roll.
11. Eliminate all gaps in electrode path.
12. Replace with proper guide diameter.
13. Reset liner and lock or replace with new liner

Premature contact tip failure.

Possible Cause

1. Improper voltage or wire feed speed.
2. Erratic wire feeding.
3. Improper tip stickout.
4. Improper electrode stickout.

Possible Solution

1. Set parameters.
2. See 'Erratic Arc'.
3. Adjust nozzle / tip relationship.
4. Change length of wire stickout.

MIG Gun running hot.

Possible Cause

1. Exceeding duty cycle.
2. Loose or poor power connection.

Possible Solution

1. **a.** Replace with properly rated duty cycle MIG Gun.
b. Decrease parameters to within Gun rating.
2. **a.** Clean and retighten all electrical connections
b. Check rating and condition of ground clamp

Porosity in weld.

Possible Cause

1. Nozzle/Insulator/O-rings worn.
2. Retaining head spring/band
3. Extreme heat or duty cycle.
4. Gas not getting to the weld
5. Gas ports plugged.
6. Loose fittings or cut gas hose.

Possible Solution

1. Replace
2. Replace retaining head.
3. Use Xheavy duty consumables.
4. Check gas regulator/flowmeter/cylinder
5. Clean or replace gas diffuser//nozzle.
6. Tighten or repair hose lines.

1.1 LINER REPLACEMENT

TOOLS REQUIRED

- Vise
- 5/64 Allen wrench
- Lineman pliers

1. Remove nozzle, contact tip and tip holder from gooseneck. (Not shown)
2. With gun straightened, loosen liner set screw on quick connect power pin at back end of gun using a 5/64" Allen wrench. (See Figure 1)
3. Using pliers, grip liner and remove from gun.
4. Install new liner by feeding through gun. Use short strokes to avoid kinking. Use clockwise rotation as needed.
5. Be sure o-rings on liner head seats into inside bore of power pin.
6. Tighten set screw on power pin to secure liner. Do not overtighten.
7. Using pliers, trim liner to extend to 3/4" (20mm) from end of gooseneck.
8. Remove any burrs on the inside and outside of liner to ensure smooth wire flow and proper seating inside diffuser.
9. Reinstall tip holder, contact tip and nozzle onto gooseneck.
- Note: Liner should be visible through gas holes of tip holder.
10. Install gun to feeder.

* Trim dimension may change depending on front end consumables being used.

MIG

SEMI-AUTOMATIC GUN CONVERSION KITS
AVAILABLE FOR BERNARD, LINCOLN & TWECO
WITH A SIMPLE CHANGE-OUT OF PARTS

LIGHTNING® RETAINING HEADS

Part #	Description
65-3103 *	Retaining Head for Extra Heavy Duty
63-3103	Retaining Head T/L
63-3103-2	Retaining Head T/L
63-3116	Thread-on Retaining Head HD
63-3402	Retaining Ring
63-3301	O-Ring Orange O16
63-3118-T	Diffuser, Bernard Threaded

* This retaining head must be used with #65-11XX contact tip. See **Contact Tips Selector Chart** on p.2

BENEFITS

- ✓ Greater surface area contact between tip and head ensures better heat dissipation and conductivity.
- ✓ Tapered tip design creates a more secure seat, eliminating loose tips.
- ✓ Cooler tip temperature reduces wear and extends tip life.
- ✓ Dual-lead thread design allows for 180 degree rotation of tip to new wear point for extended tip life.
- ✓ Brass insert prevents wear and extends life.
- ✓ Superior surface finish minimizes spatter adhesion.
- ✓ Durable hard drawn copper or brass withstands abuse.

AMERICAN TORCH TIP

**ROBOTIC TORCH - 550 AMPS****A New Reliability in Robotic Guns**

- The Lightning[®] 550 amp robotic MIG gun has been carefully designed to reduce downtime from part failure, faulty welds and change outs.
- All our components are made to operate in the harsh environment of high volume production. The American Torch Tip Lightning MIG gun stands up to excessive vibration, cable whip, temperature fluctuations and unexpected crashes.
- Precision components allow change outs to be made with confidence that the gooseneck will always be aligned with the gun housing; insuring reliability and repeatability.

Nozzle

- High polished finish offers superior spatter protection.
- Hard drawn copper or brass in variety of shapes and sizes.
- Brass inserts designed to protect against wear and offers superior nozzle protection.

Tapered Contact Tip and Diffuser

- Tip and diffuser design allows for greater heat dissipation and electrical conductivity.
- Easy start contact tip has quick change double thread.

Easy Change Gooseneck

- Fast and simple gooseneck change outs.
- Insulated aluminum protects the gooseneck.
- 650 AMP capacity.

High Strength Handle

- Solid Body design crafted from aircraft aluminum that stands up to extreme impact.

Strain Relief

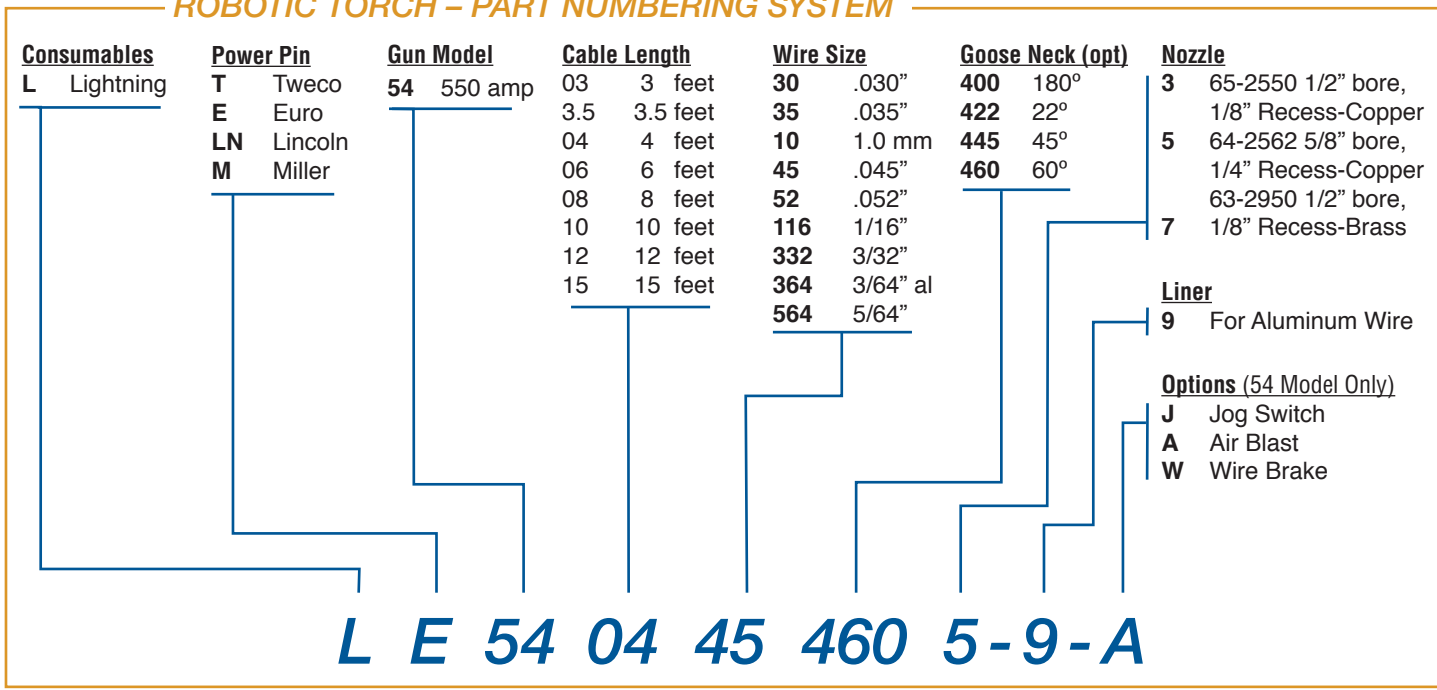

- Supports cable weight and reduces cable kinking.

Adapters

- 22° robotic arms, adapters for most wire feeders, and a complete line of replacement parts are available.

LIGHTNING® RETAINING HEADS

Part #	Description
65-3103 *	Retaining Head for Extra Heavy Duty
63-3103	Retaining Head T/L
63-3103-2	Retaining Head T/L
63-3116	Thread-on Retaining Head HD
63-3402	Retaining Ring
63-3301	O-Ring Orange O16
63-3118-T	Diffuser, Bernard Threaded

* This retaining head must be used with #65-11XX contact tip. See **Contact Tips Selector Chart** on p.2

BENEFITS

- ✓ Greater surface area contact between tip and head ensures better heat dissipation and conductivity.
- ✓ Tapered tip design creates a more secure seat, eliminating loose tips.
- ✓ Cooler tip temperature reduces wear and extends tip life.
- ✓ Dual-lead thread design allows for 180 degree rotation of tip to new wear point for extended tip life.
- ✓ Brass insert prevents wear and extends life.
- ✓ Superior surface finish minimizes spatter adhesion.
- ✓ Durable hard drawn copper or brass withstands abuse.

Use the Lightning® contact tip system (gooseneck insulator, retaining head, contact tip and nozzle) with Bernard® Lincoln® or Tweco® MIG guns. Use 63-3118 Retaining Head on goosenecks with external 9/16"-18 thread, such as Q-gun and EZ Feed guns with 1/4" NPT thread.

† T-Series retaining head can only be used on Bernard T-Series (Tregaskiss) guns.

‡ 63-11XX (XX = your wire size)

** 6X-XXXX (see Nozzle Selector Chart on next page)

AVAILABLE FOR BERNARD, LINCOLN & TWECO WITH A SIMPLE CHANGE-OUT OF PARTS

LIGHTNING® RETAINING HEADS

Part #	Description
65-3103 *	Retaining Head for Extra Heavy Duty
63-3103	Retaining Head T/L
63-3103-2	Retaining Head T/L
63-3116	Thread-on Retaining Head HD
63-3402	Retaining Ring
63-3301	O-Ring Orange O16
63-3118-T	Diffuser, Bernard Threaded

* This retaining head must be used with #65-11XX contact tip. See Contact Tips Selector Chart on p.2

BENEFITS

- ✓ Greater surface area contact between tip and head ensures better heat dissipation and conductivity.
- ✓ Tapered tip design creates a more secure seat, eliminating loose tips.
- ✓ Cooler tip temperature reduces wear and extends tip life.
- ✓ Dual-lead thread design allows for 180 degree rotation of tip to new wear point for extended tip life.
- ✓ Brass insert prevents wear and extends life.
- ✓ Superior surface finish minimizes spatter adhesion.
- ✓ Durable hard drawn copper or brass withstands abuse.

BERNARD® MIG TORCHES

Use the Lightning® contact tip system (gooseneck insulator, retaining head, contact tip and nozzle) with Bernard® Lincoln® or Tweco® MIG guns. Use 63-3118 Retaining Head on goosenecks with external 9/16"-18 thread, such as Q-gun and EZ Feed guns with 1/4" NPT thread.

† T-Series retaining head can only be used on Bernard T-Series (Tregasskiss) guns.

‡ 63-11XX (XX = your wire size)

** 6X-XXXX (see Nozzle Selector Chart on next page)

LIGHTNING® RETAINING HEADS

Part #	Description
65-3103 *	Retaining Head for Extra Heavy Duty
63-3103	Retaining Head T/L
63-3103-2	Retaining Head T/L
63-3116	Thread-on Retaining Head HD
63-3402	Retaining Ring
63-3301	O-Ring Orange O16
63-3118-T	Diffuser, Bernard Threaded

* This retaining head must be used with #65-11XX contact tip. See Contact Tips Selector Chart on p.2

BENEFITS

- ✓ Greater surface area contact between tip and head ensures better heat dissipation and conductivity.
- ✓ Tapered tip design creates a more secure seat, eliminating loose tips.
- ✓ Cooler tip temperature reduces wear and extends tip life.
- ✓ Dual-lead thread design allows for 180 degree rotation of tip to new wear point for extended tip life.
- ✓ Brass insert prevents wear and extends life.
- ✓ Superior surface finish minimizes spatter adhesion.
- ✓ Durable hard drawn copper or brass withstands abuse.

LIGHTNING® RETAINING HEADS

Part #	Description
65-3103 *	Retaining Head for Extra Heavy Duty
63-3103	Retaining Head T/L
63-3103-2	Retaining Head T/L
63-3116	Thread-on Retaining Head HD
63-3402	Retaining Ring
63-3301	O-Ring Orange O16
63-3118-T	Diffuser, Bernard Threaded

* This retaining head must be used with #65-11XX contact tip. See Contact Tips Selector Chart on p.2

BENEFITS

- ✓ Greater surface area contact between tip and head ensures better heat dissipation and conductivity.
- ✓ Tapered tip design creates a more secure seat, eliminating loose tips.
- ✓ Cooler tip temperature reduces wear and extends tip life.
- ✓ Dual-head thread design allows for 180 degree rotation of tip to new wear point for extended tip life.
- ✓ Brass insert prevents wear and extends life.
- ✓ Superior surface finish minimizes spatter adhesion.
- ✓ Durable hard drawn copper or brass withstands abuse.

MIG Welder Troubleshooting Guide

1. Poor Wire Feed

- Conduit liner clogged or kinked
- Incorrect liner size or contact tip
- Line cut too short and not seating properly in gas diffuser
- Drive rolls too tight resulting in scoring of welding wire
- Welding wire dirty, rusty and/or too much cast

2. Short Tip Life

- Drive rolls too tight resulting in scoring of the welding wire
- Welding wire dirty, rusty and/or too much cast
- Uncoated wire being used, increasing usage
- Wrong tip size
- Over torch rated duty cycle
- Loose contact tip and/or retaining head

3. Gun Overheating

- Loose retaining screw on quick connect block
- Insufficient gauge power cable and/or ground cable
- Loose connector cone and/or cone nut
- Gun being run beyond its amperage range
- Electrical malfunction in power source

4. Switch Malfunctioning

- Bad connection of leads to switch terminals
- Spatter built up between lever and switch housing
- Contacts dirty in switch
- Switch housing screws loose
- Broken or worn switch lead

5. Weld Porosity

- Spatter built up in nozzle blocking gas
- Leaks in gas hose or improper connection
- O-rings on power pin are cut or damaged
- Inner tube loose from connector cone
- Improper shielding gas or welding wire
- Rusty or poor quality welding wire
- Parent metal rusty or contaminated or high in Sulfur content
- Flow improperly set

6. Contact Tip Burn Back

- Improper voltage and/or wire feed speed
- Erratic wire feeding
- Improper tip stick-out
- Improper electrode stick-out
- Faulty ground

7. Erratic Arc

- Worn contact tip
- Buildup inside of line
- Wrong tip size
- Not enough bend in neck

8. Extreme Spatter

- Improper machine parameters
- Improper tip installation
- Improper tip shielding
- Contaminated wire or work piece
