Blendex U™ Turbo

The Blendex U™ Turbo is specifically designed to blend fillet welds and deburr sharp edges. Made of a heat resistant non-woven matrix with self-sharpening grains, it provides a high material removal rate that conforms to tough angled corners and hard to reach areas without smearing.

Product Features

- Heat resistant non-woven matrix with self-sharpening grains
- Conforms to tough angles, hard to reach areas and any given surface profile
- Excellent performance on stainless steel, aluminum and steel
- Non-Smearing
